

IN THE CLAIMS

Please amend the claims as follows:

Claim 1 (Currently Amended): A digital camera having an image forming device configured to image a subject by a setup exposure condition and a digital image processing device configured to convert imaging data from the image forming device into a digital image, the digital camera comprising:

a setup device configured to set up a plurality of ~~[[the]]~~ exposure conditions,
~~[[a]]~~ an imaging data obtaining device configured to obtain a plurality of imaging data imaged in accordance with the plurality of exposure conditions set by the ~~plurality exposure conditions~~ setup device, and

a sharpness comparison device configured to compare ~~[[a]]~~ sharpness based on the plurality of imaging data obtained by the ~~plurality of~~ imaging data obtaining device, and to determine whether a difference in sharpness of the plurality of imaging data is caused by a shake of the digital camera or a movement of the subject based on the compared sharpness.

~~wherein a shake of the camera or a blur of the subject is determined corresponding to the comparison result of the sharpness comparison device.~~

Claim 2 (Currently Amended): The digital camera according to Claim 1, further comprising:

a handshake preventing exposure time output device configured to output an exposure time for preventing a handshake blur in an image caused by a shake of the digital camera based on a focal length of a photographic lens in the image forming device,

wherein an existence of the camera shake is determined based on the handshake preventing exposure time output by the handshake preventing exposure time output device.

Claim 3 (Currently Amended): The digital camera according to Claim 2, further comprising:

a warning device configured to warn of the ~~camera~~ shake of the digital camera when the existence of a camera shake of the digital camera is determined ~~existed~~.

Claim 4 (Currently Amended): The digital camera according to Claim 2, wherein when the existence of a camera shake of the digital camera is determined ~~existed~~, a predetermined exposure time while ~~functioning~~ recording a still image ~~recording~~ is shortened, and ~~when the exposure is not enough~~, a strobe is flashed in accordance with shortening the predetermined exposure time.

Claim 5 (Currently Amended): The digital camera according to Claim 2, wherein when ~~the subject blur is existed~~ a movement of the subject is determined to exist, a sensitivity for increasing the output of the imaging data while ~~functioning~~ recording a still image ~~recording~~ is increased.

Claim 6 (Currently Amended): The digital camera according to Claim 1, further comprising:

a display device configured to display an image processed by the digital image processing device,

wherein a display time to the display device is made constant regardless of ~~[[the]]~~ an exposure time in the image forming device.

Claim 7 (Currently Amended): The digital camera according to Claim 2, further comprising:

a display device configured to display an image processed by the digital image processing device,

wherein a display time to the display device is made constant regardless of ~~[[the]]~~ an exposure time in the image forming device.

Claim 8 (Currently Amended): The digital camera according to Claim 3, further comprising:

a display device configured to display an image processed by the digital image processing device,

wherein a display time to the display device is made constant regardless of ~~[[the]]~~ an exposure time in the image forming device.

Claim 9 (Currently Amended): The digital camera according to Claim 4, further comprising:

a display device configured to display an image processed by the digital image processing device,

wherein a display time to the display device is made constant regardless of ~~[[the]]~~ an exposure time in the image forming device.

Claim 10 (Currently Amended): The digital camera according to Claim 5, further comprising:

a display device configured to display an image processed by the digital image processing device,

wherein a display time to the display device is made constant regardless of ~~[[the]]~~ an exposure time in the image forming device.
